

# Enhancing the online university collaborate experience during the COVID-19 pandemic

## The Problem?

For over a year now we have been living amidst a global pandemic which has seen a new age of education take its place through online learning.

There have been many issues with the switch to online-based learning and a big part of this is the complete lack of interaction and collaboration students are getting with each other.

## The Solution:

A web-application to revitalize group work online, where students can organize their collaborative efforts with tools made specifically to their needs. The ability to flawlessly connect, share and track the work your group is doing in one place.

## The Tools:

- Easily create the groups you need with the students on your course.

- Set tasks and share your work to the groups room, where you can track the progress and contributions from your members.

- Connect and discuss your work through instant messaging in your groups chat.
