Professional Summary

Overall, my main focus right now is technology as it stands and as it progresses in the future. Despite this, the skills I have gained show that I have what it takes to work hard and excel at any job I do. My preference is to work with technology whether that is engineering, software development or even working in a tech shop making recommendations based on the knowledge I have. Being able to apply these skills makes sure that I am always on top of what I need to be doing and approaching a job with enthusiasm and determination.

Skills

Over the years after being in jobs like retail and restaurant service, my communication and leadership skills have improved significantly. My ability to talk to people with knowledge and confidence has allowed me to be successful in the jobs I've had.

In terms of IT, my skills range from making a spreadsheet on excel all the way to building my own computers and circuits as well as programming said circuits with my own code. Throughout university I have become much more savvy with Java and SQL as well as journeying into 3D design and business.

University on a whole has improved my social life and given me crucial life skills such as money and time management that are imperative for success and progression in my work and education.

Experience

Team Member   Sep 2017 - Sep 2018
Greggs   West Yorkshire, England
At Greggs it was always important that I approached every service with a smile and ensured the customer left the shop happy. I was required to serve on the front desk in a busy environment as well as keeping the shop clean and tidy. Most days I would also be required to close the shop which required working quickly and efficiently to get the shop ready for closing whilst still serving customers. It was important that I pushed deals and ensured the customer got the most out of their experience and was likely to come back.

Kitchen Assistant/Waiter   Sep 2017 - Sep 2018
Newsholme Manor   West Yorkshire, England
At Newsholme Manor my main job was to keep the kitchen clean as well as cleaning the plates, cutlery, pans etc as they came to me. As I progressed I later took the role as a waiter on some of my shifts which involved much more customer interaction and service. I would prepare, serve and collect food from tables whilst doing my best to keep every customer happy and wanting to come back.

Education

GCSEs/A-Levels: Maths, Computer Science, Sport

Beckfoot Oakbank

I finished my GCSEs with all grades at A*-C. I continued to sixth form where I studied Maths, Computer Science, Biology and Sport. I achieved the grades I needed for University and left school with three A-Level qualifications.

Bachelor of Science: Computer Science

Bangor University

I am currently studying Computer Science (BCs) at Bangor Univeristy. As of now I am still studying there and achieved a 70% overall average in my first/second year. I will graduate in 2021 with a First Class degree in Computer Science if I continue to maintain these standards. The degree has given me a very strong background in technology and computing. My knowledge of computers and technology in general (software and hardware) has grown substantially. Throughout University, I have developed particular interest in Game Design and Virtual Reality. The dissertation I am writing in my 3rd year will be based entirely on VR and should help to build my overall skills.
