Education

I am currently in my third year of university studying BSc Computer Information Systems at Bangor University.

GCSE's: Maths, English Literature, English Language, Biology, Chemistry, Spanish, Geography, Citizenship, Religious Studies (9 A*-C); (2013-2015) – The Belvedere Academy

A Levels: ICT (B), Business Studies (C), Health and Social care (C); (2016-2018) – Carmel College

IT Skills

Coding languages: Java, JavaScript, CSS/HTML, SQL

I have used JavaScript, CSS and HTML to create and style my own website. I am also currently learning how to use SQL in my databases module to write queries and design databases. I have used C# to create a game in Unity as part of my game development module and a till system in my application development module.

Projects

During my second year, I worked on a project with my team in my Software Hut module. This module taught me valuable team working skills and how to co-operate with others in a group. This module was to do with software engineering and so the project we were working on was in the style of a real-world project. This module helped me to understand and create key business documents that will be necessary in IT Projects.

Retail Experience

Deichmann, Paradise Street, Liverpool

September 2017 – September 2018

Sales Assistant

This job sculpted me into an all-round member of staff as I was tasked with many roles including serving customers on the till, tidying the shop floor, and working in the stockroom. I worked here alongside studying for my A-Levels. I had to have great time management skills to be able to work and study. This job also taught me independence as I worked alone on the shop floor and in a group with others.

Work Experience

I have done work experience in a primary school for a week as part of my Health and Social Care coursework. During this week, I observed the children whilst also taking notes to learn more about the job role. This enhanced my time management skills as I needed to be at the school on time, it also helped my communication skills as I was speaking to both the teacher and the children.

Interests

I enjoy playing tennis and keeping fit by running on the track. I am also part of the African Caribbean society at my university. I am a qualified first aider and use to be part of St John Ambulance as well as air cadets where I completed the bronze Duke of Edinburgh award. I can work alone, if I am given guidance and direction, and I also enjoy working as part of a team as this allows me to collaborate with others. I am passionate about technology and love learning about it as the field is changing and developing all the time which is exciting to me as it means I am constantly learning new things and developing valuable skills.
